

Fill out the below (along with tracing) and Email this back to info@republicboot.com

Use a **Letter** size paper to trace your foot (trace on the diagonal)

1. Wear comfortable socks.
2. Stand with one foot on the sheet and the other off to the side, put equal weight on both feet.
3. Have someone trace your foot with a thin pen holding it at a 90° angle, avoid multiple lines.
4. Keep standing, applying equal weight on both feet, have someone wrap a tape measure snugly around your foot in these positions:

A Ball: the widest part of your foot usually is from the big bone below your big toe to the bone below your pinky toe - make sure and wrap the measuring tape all the way around your foot snugly.

B Instep: find the bone on top of your foot and wrap the tape measure underneath your arch all the way around your foot.

C Heel: measure around the heel and over where the foot bends, make sure to measure all the way around your foot.

D Calf: run a tape measure up your leg to the widest spot and measure the circumference at that point. Note the height of this measurement as well.

LEFT FOOT MEASUREMENTS	Size of boot and make usually worn	RIGHT FOOT MEASUREMENTS
BALL:	Size of shoe usually worn	BALL:
INSTEP:	My feet are:	INSTEP:
HEEL:	Wide Normal Slim	HEEL:
CALF:  " @ " HIGH	I like my shoes:	HEEL:
	Tight Snug Loose	CALF:  " @ " HIGH
